STAINLESS STEEL TRAFFIC AND SECURITY MIRRORS

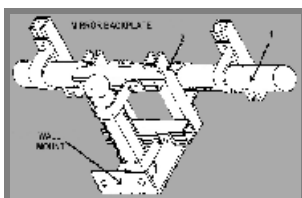

Mirror Face

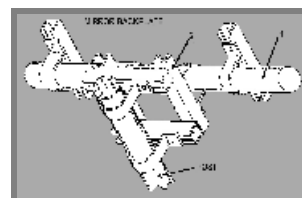

View of back plate showing wall mount

A new range of convex mirrors to complement the universal and polycarbonate versions. These have a very high quality stainless steel mirror mounted on traditional robust Mirror Technology fittings. The unit is available with an ABS or coated steel back plate. The mountings are secured with vandal resistant fixings.

The mirror surface has the JISLON® HYDRO hydrophilic coating which significantly reduces condensation on the mirror surface by preventing the build up of water droplets on the surface. This means the mirror will remain clear in misty conditions above 0°C. The mirror is also essentially self cleaning with dirt flowing off the surface during rainfall. The coating is most effective when the unit is exposed to rain and sun but the mirror will function under all conditions and can be cleaned by flushing with water in dry weather.
